

Question 1

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

25

15

30

Feedback

The correct answer is: 25

Question 2

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

HelloWorld

Hello World

Hello

World

Feedback

The correct answer is: Hello World

Question 3

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To skip the current iteration of a loop

To terminate the program

To pause the execution of a program

To exit from a loop or switch statement

Feedback

The correct answer is: To exit from a loop or switch statement

Question 4

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be compared

To allow an object to be serialized

To allow an object to be cloned

To allow an object to be deserialized

Feedback

The correct answer is: To allow an object to be serialized

Question 5

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

- a. while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.
- b. while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.
- c. Both while and do-while loops check the condition after executing the loop body.
- d. Both while and do-while loops check the condition before executing the loop body.

Feedback

The correct answer is: a. while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 6

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

- a. To terminate a thread
- b. To prevent multiple threads from accessing a resource simultaneously

- c. To allow multiple threads to access a resource simultaneously
- d. To create a new thread

Feedback

The correct answer is: b. To prevent multiple threads from accessing a resource simultaneously

Question 7

1.00/1.00

Flag question

Question text

List three features of Java

- a. Platform-independent, Procedural, Secure
- b. Platform-dependent, Procedural, Insecure
- c. Platform-independent, Object-oriented, Secure
- d. Platform-dependent, Object-oriented, Secure

Feedback

The correct answer is: c. Platform-independent, Object-oriented, Secure

Question 8

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

- a. To refer to the superclass
- b. To refer to a local variable

- c. To refer to a static method
- d. To refer to the current object instance
- e. To refer to the subclass

Feedback

The correct answer is: d. To refer to the current object instance

Question 9

0.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

- a. Scanner is part of the java.util package.
- b. Scanner can be used to read input from a file.
- c. Scanner can be used to read input from the console.
- d. Scanner is synchronized.

Feedback

The correct answers are:

- a. Scanner is part of the java.util package.,
- b. Scanner can be used to read input from a file.
- c. Scanner can be used to read input from the console.,

Question 10

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

- a. `public static void main(String[] args)`
- b. `public static void main()`
- c. `public void main(String[] args)`
- d. `public void main()`

Feedback

The correct answer is: `public static void main(String[] args)`

Question 11

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

- a. Java Development Kit (JDK)
- b. Java Runtime Environment (JRE)
- c. Java Compiler
- d. Java Virtual Machine (JVM)

Feedback

The correct answer is: d. Java Virtual Machine (JVM)

Question 12

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

4

2.5

-2.5

2

Feedback

The correct answer is: 2

Question 13

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

private

internal

public

protected

default

Feedback

The correct answers are: public, private, protected, default

Question 14

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = Car.new();

Car myCar = create Car();

Car myCar = Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 15

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

while

switch

for

if

Feedback

The correct answers are: if, switch

Question 16

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

2

3

4

1

Feedback

The correct answer is: 3

Question 17

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;  
int y = 20;  
int z = x > y ? x : y;  
System.out.println(z);
```

20

10

0

30

Feedback

The correct answer is: 20

Question 18

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

21

16

11

10

Feedback

The correct answer is: 11

Question 19

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

2 3 4 5

5 4 3 2 1

5 4 3 2

1 2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 20

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To throw exceptions

To catch exceptions

To terminate the program

To execute code regardless of whether an exception is thrown

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

10

11

21

16

Feedback

The correct answer is: 11

Question 2

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

3

1

4

2

Feedback

The correct answer is: 3

Question 3

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

25

30

15

Feedback

The correct answer is: 25

Question 4

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

World

HelloWorld

Hello World

Hello

Feedback

The correct answer is: Hello World

Question 5

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 6

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To terminate a thread

To create a new thread

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 7

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To execute code regardless of whether an exception is thrown

To terminate the program

To catch exceptions

To throw exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 8

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

while

if

for

switch

Feedback

The correct answers are: if, switch

Question 9

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To terminate the program

To pause the execution of a program

To skip the current iteration of a loop

To exit from a loop or switch statement

Feedback

The correct answer is: To exit from a loop or switch statement

Question 10

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public void main(String[] args)

public void main()

public static void main(String[] args)

public static void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 11

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Compiler

Java Runtime Environment (JRE)

Java Development Kit (JDK)

Java Virtual Machine (JVM)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 12

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is synchronized.

Scanner can be used to read input from the console.

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 13

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;  
int y = 20;  
int z = x > y ? x : y;  
System.out.println(z);
```

0

20

30

10

Feedback

The correct answer is: 20

Question 14

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

4

-2.5

2

2.5

Feedback

The correct answer is: 2

Question 15

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to a local variable

To refer to the current object instance

To refer to the superclass

To refer to the subclass

To refer to a static method

Feedback

The correct answer is: To refer to the current object instance

Question 16

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Procedural, Secure

Platform-dependent, Procedural, Insecure

Platform-independent, Object-oriented, Secure

Platform-dependent, Object-oriented, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 17

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = Car.new();

Car myCar = create Car();

Car myCar = Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 18

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

1 2 3 4 5

5 4 3 2 1

5 4 3 2

2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 19

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

default

internal

protected

public

private

Feedback

The correct answers are: public, private, protected, default

Question 20

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be compared

To allow an object to be deserialized

To allow an object to be serialized

To allow an object to be cloned

Feedback

The correct answer is: To allow an object to be serialized

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main()

public static void main(String[] args)

public void main(String[] args)

public void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 2

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To terminate the program

To exit from a loop or switch statement

To skip the current iteration of a loop

To pause the execution of a program

Feedback

The correct answer is: To exit from a loop or switch statement

Question 3

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be serialized

To allow an object to be cloned

To allow an object to be deserialized

To allow an object to be compared

Feedback

The correct answer is: To allow an object to be serialized

Question 4

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the current object instance

To refer to the subclass

To refer to a local variable

To refer to the superclass

To refer to a static method

Feedback

The correct answer is: To refer to the current object instance

Question 5

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Runtime Environment (JRE)

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Java Compiler

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 6

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if (x > 10) { // code to execute }

if x > 10 { // code to execute }

if (x > 10) // code to execute

if x > 10 // code to execute

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 7

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

2 3 4 5

5 4 3 2

1 2 3 4 5

5 4 3 2 1

Feedback

The correct answer is: 1 2 3 4 5

Question 8

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

HelloWorld

World

Hello

Hello World

Feedback

The correct answer is: Hello World

Question 9

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

switch

while

for

if

Feedback

The correct answers are: if, switch

Question 10

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

-2.5

2

2.5

4

Feedback

The correct answer is: 2

Question 11

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To create a new thread

To allow multiple threads to access a resource simultaneously

To terminate a thread

To prevent multiple threads from accessing a resource simultaneously

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 12

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = create Car();

Car myCar = Car();

Car myCar = Car.new();

Feedback

The correct answer is: Car myCar = new Car();

Question 13

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner can be used to read input from the console.

Scanner can be used to read input from a file.

Scanner is synchronized.

Scanner is part of the java.util package.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 14

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

Both while and do-while loops check the condition before executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 15

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To catch exceptions

To execute code regardless of whether an exception is thrown

To terminate the program

To throw exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 16

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Platform-independent, Object-oriented, Secure

Platform-independent, Procedural, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 17

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

2

3

4

1

Feedback

The correct answer is: 3

Question 18

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

protected

public

internal

default

private

Feedback

The correct answers are: public, private, protected, default

Question 19

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

15

25

30

The correct answer is: 1 2 3 4 5

Question 2

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

Hello World

Hello

World

HelloWorld

Feedback

The correct answer is: Hello World

Question 3

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

15

25

20

30

Feedback

The correct answer is: 25

Question 4

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main(String[] args)

public void main()

public void main(String[] args)

public static void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 5

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

if

while

switch

for

Feedback

The correct answers are: if, switch

Question 6

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

10

21

11

16

Feedback

The correct answer is: 11

Question 7

1.00/1.00

Flag question

Question text

What is the purpose of the `this` keyword in Java?

To refer to the superclass

To refer to the subclass

To refer to a static method

To refer to a local variable

To refer to the current object instance

Feedback

The correct answer is: To refer to the current object instance

Question 8

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 9

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Procedural, Secure

Platform-independent, Object-oriented, Secure

Platform-dependent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 10

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

4

2

1

3

Feedback

The correct answer is: 3

Question 11

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

To terminate a thread

To create a new thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 12

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = create Car();

Car myCar = new Car();

Car myCar = Car();

Car myCar = Car.new();

Feedback

The correct answer is: Car myCar = new Car();

Question 13

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

-2.5

4

2.5

2

Feedback

The correct answer is: 2

Question 14

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is synchronized.

Scanner can be used to read input from the console.

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 15

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be compared

To allow an object to be deserialized

To allow an object to be serialized

To allow an object to be cloned

Feedback

The correct answer is: To allow an object to be serialized

Question 16

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Development Kit (JDK)

Java Virtual Machine (JVM)

Java Compiler

Java Runtime Environment (JRE)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 17

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

internal

public

protected

private

default

Feedback

The correct answers are: public, private, protected, default

Question 18

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To execute code regardless of whether an exception is thrown

To terminate the program

To throw exceptions

To catch exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 19

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;  
int y = 20;  
int z = x > y ? x : y;  
System.out.println(z);
```

20

30

10

0

Feedback

The correct answer is: 20

Question 20

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To pause the execution of a program

To terminate the program

To skip the current iteration of a loop

To exit from a loop or switch statement

Feedback

The correct answer is: To exit from a loop or switch statement

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

To create a new thread

To terminate a thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 2

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public void main(String[] args)

public static void main(String[] args)

public static void main()

public void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 3

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the subclass

To refer to a static method

To refer to a local variable

To refer to the superclass

To refer to the current object instance

Feedback

The correct answer is: To refer to the current object instance

Question 4

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To pause the execution of a program

To skip the current iteration of a loop

To exit from a loop or switch statement

To terminate the program

Feedback

The correct answer is: To exit from a loop or switch statement

Question 5

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

Hello

World

Hello World

HelloWorld

Feedback

The correct answer is: Hello World

Question 6

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Procedural, Secure

Platform-dependent, Procedural, Insecure

Platform-dependent, Object-oriented, Secure

Platform-independent, Object-oriented, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 7

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To execute code regardless of whether an exception is thrown

To terminate the program

To catch exceptions

To throw exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 8

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be deserialized

To allow an object to be cloned

To allow an object to be compared

To allow an object to be serialized

Feedback

The correct answer is: To allow an object to be serialized

Question 9

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

protected

public

default

internal

private

Feedback

The correct answers are: public, private, protected, default

Question 10

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

5 4 3 2

5 4 3 2 1

2 3 4 5

1 2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 11

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

15

25

30

Feedback

The correct answer is: 25

Question 12

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

21

11

10

16

Feedback

The correct answer is: 11

Question 13

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner can be used to read input from a file.

Scanner is synchronized.

Scanner is part of the java.util package.

Scanner can be used to read input from the console.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 14

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 15

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

3

2

4

1

Feedback

The correct answer is: 3

Question 16

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = Car.new();

Car myCar = Car();

Car myCar = create Car();

Car myCar = new Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 17

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

if

for

while

switch

Feedback

The correct answers are: if, switch

Question 18

0.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

-2.5

2

4

2.5

Feedback

The correct answer is: 2

Question 19

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Java Runtime Environment (JRE)

Java Compiler

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 20

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;  
int y = 20;  
int z = x > y ? x : y;  
System.out.println(z);
```

10

30

0

20

Feedback

The correct answer is: 20

===

NA

Question 1

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = Car();

Car myCar = create Car();

Car myCar = Car.new();

Feedback

The correct answer is: Car myCar = new Car();

Question 2

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

4

2

-2.5

2.5

Feedback

The correct answer is: 2

Question 3

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

4

1

2

3

Feedback

The correct answer is: 3

Question 4

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

5 4 3 2 1

5 4 3 2

1 2 3 4 5

2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 5

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

World

Hello

HelloWorld

Hello World

Feedback

The correct answer is: Hello World

Question 6

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To terminate the program

To pause the execution of a program

To exit from a loop or switch statement

To skip the current iteration of a loop

Feedback

The correct answer is: To exit from a loop or switch statement

Question 7

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the current object instance

To refer to the subclass

To refer to a local variable

To refer to a static method

To refer to the superclass

Feedback

The correct answer is: To refer to the current object instance

Question 8

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Runtime Environment (JRE)

Java Compiler

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 9

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

21

16

10

11

Feedback

The correct answer is: 11

Question 10

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be compared

To allow an object to be deserialized

To allow an object to be serialized

To allow an object to be cloned

Feedback

The correct answer is: To allow an object to be serialized

Question 11

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To prevent multiple threads from accessing a resource simultaneously

To create a new thread

To allow multiple threads to access a resource simultaneously

To terminate a thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 12

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public void main()

public static void main()

public void main(String[] args)

public static void main(String[] args)

Feedback

The correct answer is: public static void main(String[] args)

Question 13

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;  
int y = 20;  
int z = x > y ? x : y;  
System.out.println(z);
```

30

10

20

0

Feedback

The correct answer is: 20

Question 14

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition before executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 15

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Procedural, Insecure

Platform-independent, Procedural, Secure

Platform-independent, Object-oriented, Secure

Platform-dependent, Object-oriented, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 16

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

for

if

while

switch

Feedback

The correct answers are: if, switch

Question 17

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

15

25

30

Feedback

The correct answer is: 25

Question 18

0.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is part of the java.util package.

Scanner can be used to read input from the console.

Scanner is synchronized.

Scanner can be used to read input from a file.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 19

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

default

public

private

protected

internal

Feedback

The correct answers are: public, private, protected, default

Question 20

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To throw exceptions

To execute code regardless of whether an exception is thrown

To catch exceptions

To terminate the program

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

===

NA

Question 1

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

public

private

protected

default

internal

Feedback

The correct answers are: public, private, protected, default

Question 2

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To catch exceptions

To execute code regardless of whether an exception is thrown

To throw exceptions

To terminate the program

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 3

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main(String[] args)

public void main(String[] args)

public static void main()

public void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 4

0.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if (x > 10) // code to execute

if x > 10 // code to execute

if (x > 10) { // code to execute }

if x > 10 { // code to execute }

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 5

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to a local variable

To refer to the superclass

To refer to a static method

To refer to the current object instance

To refer to the subclass

Feedback

The correct answer is: To refer to the current object instance

Question 6

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

11

21

16

10

Feedback

The correct answer is: 11

Question 7

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

World

Hello World

HelloWorld

Hello

Feedback

The correct answer is: Hello World

Question 8

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Platform-dependent, Object-oriented, Secure

Platform-independent, Procedural, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 9

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

5 4 3 2

5 4 3 2 1

2 3 4 5

1 2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 10

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To skip the current iteration of a loop

To terminate the program

To pause the execution of a program

To exit from a loop or switch statement

Feedback

The correct answer is: To exit from a loop or switch statement

Question 11

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

15

20

30

25

Feedback

The correct answer is: 25

Question 12

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

2

4

-2.5

2.5

Feedback

The correct answer is: 2

Question 13

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To allow multiple threads to access a resource simultaneously

To create a new thread

To terminate a thread

To prevent multiple threads from accessing a resource simultaneously

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 14

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = Car.new();

Car myCar = new Car();

Car myCar = Car();

Car myCar = create Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 15

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be serialized

To allow an object to be cloned

To allow an object to be compared

To allow an object to be deserialized

Feedback

The correct answer is: To allow an object to be serialized

Question 16

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

for

while

if

switch

Feedback

The correct answers are: if, switch

Question 17

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is synchronized.

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Scanner can be used to read input from the console.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 18

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

1

2

4

3

Feedback

The correct answer is: 3

Question 19

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 20

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Runtime Environment (JRE)

Java Compiler

Java Development Kit (JDK)

Java Virtual Machine (JVM)

Feedback

The correct answer is: Java Virtual Machine (JVM)

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

`public void main(String[] args)`

`public static void main()`

`public static void main(String[] args)`

`public void main()`

Feedback

The correct answer is: `public static void main(String[] args)`

Question 2

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

30

15

25

20

Feedback

The correct answer is: 25

Question 3

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To throw exceptions

To catch exceptions

To terminate the program

To execute code regardless of whether an exception is thrown

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 4

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

21

11

16

10

Feedback

The correct answer is: 11

Question 5

1.00/1.00

Flag question

Question text

What is the purpose of the `this` keyword in Java?

To refer to a local variable

To refer to a static method

To refer to the superclass

To refer to the subclass

To refer to the current object instance

Feedback

The correct answer is: To refer to the current object instance

Question 6

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

Both while and do-while loops check the condition before executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 7

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To allow multiple threads to access a resource simultaneously

To create a new thread

To prevent multiple threads from accessing a resource simultaneously

To terminate a thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 8

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

2 3 4 5

5 4 3 2 1

1 2 3 4 5

5 4 3 2

Feedback

The correct answer is: 1 2 3 4 5

Question 9

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

protected

default

internal

public

private

Feedback

The correct answers are: public, private, protected, default

Question 10

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

switch

while

for

if

Feedback

The correct answers are: if, switch

Question 11

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = Car();

Car myCar = create Car();

Car myCar = Car.new();

Feedback

The correct answer is: Car myCar = new Car();

Question 12

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is part of the java.util package.

Scanner can be used to read input from the console.

Scanner is synchronized.

Scanner can be used to read input from a file.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 13

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Procedural, Secure

Platform-dependent, Object-oriented, Secure

Platform-independent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 14

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if x > 10 // code to execute

if (x > 10) // code to execute

```
if x > 10 { // code to execute }
```

```
if (x > 10) { // code to execute }
```

Feedback

The correct answer is: `if (x > 10) { // code to execute }`

Question 15

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

-2.5

Feedback

The correct answer is: 3

Question 17

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Development Kit (JDK)

Java Virtual Machine (JVM)

Java Compiler

Java Runtime Environment (JRE)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 18

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

HelloWorld

Hello World

World

Hello

Feedback

The correct answer is: Hello World

Question 19

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be deserialized

To allow an object to be compared

To allow an object to be cloned

To allow an object to be serialized

Feedback

The correct answer is: To allow an object to be serialized

Question 20

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To pause the execution of a program

To terminate the program

To exit from a loop or switch statement

To skip the current iteration of a loop

Feedback

The correct answer is: To exit from a loop or switch statement

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to a local variable

To refer to the subclass

To refer to the superclass

To refer to the current object instance

To refer to a static method

Feedback

The correct answer is: To refer to the current object instance

Question 2

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To terminate the program

To catch exceptions

To execute code regardless of whether an exception is thrown

To throw exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 3

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

while

switch

if

for

Feedback

The correct answers are: if, switch

Question 4

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

4

3

1

2

Feedback

The correct answer is: 3

Question 5

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To exit from a loop or switch statement

To skip the current iteration of a loop

To terminate the program

To pause the execution of a program

Feedback

The correct answer is: To exit from a loop or switch statement

Question 6

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Object-oriented, Secure

Platform-independent, Object-oriented, Secure

Platform-independent, Procedural, Secure

Platform-dependent, Procedural, Insecure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 7

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

5 4 3 2

5 4 3 2 1

1 2 3 4 5

2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 8

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main()

public void main(String[] args)

public static void main(String[] args)

public void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 9

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

30

25

15

Feedback

The correct answer is: 25

Question 10

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To create a new thread

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

To terminate a thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 11

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

protected

internal

default

public

private

Feedback

The correct answers are: public, private, protected, default

Question 12

1.00/1.00

Remove flag

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;
```

```
double result = a / b;  
System.out.println(result);
```

4

-2.5

2

2.5

Feedback

The correct answer is: 2

Question 13

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is synchronized.

Scanner can be used to read input from the console.

Scanner can be used to read input from a file.

Scanner is part of the java.util package.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 14

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

HelloWorld

Hello

Hello World

World

Feedback

The correct answer is: Hello World

Question 15

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition after executing the loop body.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 16

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = Car();

Car myCar = create Car();

Car myCar = Car.new();

Feedback

The correct answer is: Car myCar = new Car();

Question 17

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be cloned

To allow an object to be serialized

To allow an object to be deserialized

To allow an object to be compared

Feedback

The correct answer is: To allow an object to be serialized

Question 18

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

11

10

16

21

Feedback

The correct answer is: 11

Question 19

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;
```

```
int y = 20;
```

```
int z = x > y ? x : y;  
System.out.println(z);
```

20

10

30

0

Feedback

The correct answer is: 20

Question 20

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Java Runtime Environment (JRE)

Java Compiler

Feedback

The correct answer is: Java Virtual Machine (JVM)

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the subclass

To refer to the superclass

To refer to a static method

To refer to a local variable

To refer to the current object instance

Feedback

The correct answer is: To refer to the current object instance

Question 2

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

private

protected

public

default

internal

Feedback

The correct answers are: public, private, protected, default

Question 3

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = create Car();

Car myCar = Car.new();

Car myCar = Car();

Car myCar = new Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 4

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if (x > 10) // code to execute

if (x > 10) { // code to execute }

if x > 10 { // code to execute }

if x > 10 // code to execute

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 5

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition after executing the loop body.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 6

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

15

30

25

Feedback

The correct answer is: 25

Question 7

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

Hello World

World

Hello

HelloWorld

Feedback

The correct answer is: Hello World

Question 8

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

3

2

4

Feedback

The correct answer is: 3

Question 9

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public void main(String[] args)

public static void main()

public void main()

public static void main(String[] args)

Feedback

The correct answer is: public static void main(String[] args)

Question 10

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Procedural, Insecure

Platform-independent, Procedural, Secure

Platform-dependent, Object-oriented, Secure

Platform-independent, Object-oriented, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 11

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

1 2 3 4 5

5 4 3 2 1

2 3 4 5

5 4 3 2

Feedback

The correct answer is: 1 2 3 4 5

Question 12

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

11

21

16

10

Feedback

The correct answer is: 11

Question 13

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be cloned

To allow an object to be serialized

To allow an object to be compared

To allow an object to be deserialized

Feedback

The correct answer is: To allow an object to be serialized

Question 14

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To prevent multiple threads from accessing a resource simultaneously

To terminate a thread

To allow multiple threads to access a resource simultaneously

To create a new thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 15

0.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is synchronized.

Scanner can be used to read input from a file.

Scanner can be used to read input from the console.

Scanner is part of the java.util package.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 16

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

The correct answer is: 2

Question 17

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

for

if

switch

while

Feedback

The correct answers are: if, switch

Question 18

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To pause the execution of a program

To skip the current iteration of a loop

To exit from a loop or switch statement

To terminate the program

Feedback

The correct answer is: To exit from a loop or switch statement

Question 19

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To throw exceptions

To terminate the program

To catch exceptions

To execute code regardless of whether an exception is thrown

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 20

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Development Kit (JDK)

Java Compiler

Java Virtual Machine (JVM)

Java Runtime Environment (JRE)

Feedback

The correct answer is: Java Virtual Machine (JVM)

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To skip the current iteration of a loop

To terminate the program

To pause the execution of a program

To exit from a loop or switch statement

Feedback

The correct answer is: To exit from a loop or switch statement

Question 2

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

10

16

11

21

Feedback

The correct answer is: 11

Question 3

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = create Car();

Car myCar = new Car();

Car myCar = Car.new();

Car myCar = Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 4

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;  
int y = 20;  
int z = x > y ? x : y;  
System.out.println(z);
```

20

10

30

The correct answer is: 20

Question 5

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

4

3

1

2

Feedback

The correct answer is: 3

Question 6

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

internal

private

protected

public

default

Feedback

The correct answers are: public, private, protected, default

Question 7

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Platform-independent, Procedural, Secure

Platform-dependent, Object-oriented, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 8

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

15

20

30

25

Feedback

The correct answer is: 25

Question 9

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

World

Hello World

Hello

HelloWorld

Feedback

The correct answer is: Hello World

Question 10

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 11

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to a static method

To refer to a local variable

To refer to the subclass

To refer to the current object instance

To refer to the superclass

Feedback

The correct answer is: To refer to the current object instance

Question 12

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

The correct answer is: 2

Question 13

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main()

public void main(String[] args)

public static void main(String[] args)

public void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 14

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner can be used to read input from the console.

Scanner is synchronized.

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 15

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

5 4 3 2 1

2 3 4 5

1 2 3 4 5

5 4 3 2

Feedback

The correct answer is: 1 2 3 4 5

Question 16

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To allow multiple threads to access a resource simultaneously

To terminate a thread

To create a new thread

To prevent multiple threads from accessing a resource simultaneously

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 17

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To terminate the program

To execute code regardless of whether an exception is thrown

To catch exceptions

To throw exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 18

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be deserialized

To allow an object to be compared

To allow an object to be serialized

To allow an object to be cloned

Feedback

The correct answer is: To allow an object to be serialized

Question 19

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

switch

for

if

while

Feedback

The correct answers are: if, switch

Question 20

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Compiler

Java Runtime Environment (JRE)

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Feedback

The correct answer is: Java Virtual Machine (JVM)

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To execute code regardless of whether an exception is thrown

To throw exceptions

To catch exceptions

To terminate the program

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 2

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To create a new thread

To terminate a thread

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 3

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

private

internal

public

protected

default

Feedback

The correct answers are: public, private, protected, default

Question 4

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};
for (int i : arr) {
    System.out.print(i + " ");
}
```

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

10

16

11

21

Feedback

The correct answer is: 11

Question 8

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if (x > 10) { // code to execute }

if x > 10 // code to execute

if (x > 10) // code to execute

if x > 10 { // code to execute }

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 9

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = Car.new();

Car myCar = create Car();

Car myCar = new Car();

Car myCar = Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 10

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To terminate the program

To exit from a loop or switch statement

To pause the execution of a program

To skip the current iteration of a loop

Feedback

The correct answer is: To exit from a loop or switch statement

Question 11

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main(String[] args)

public void main(String[] args)

public void main()

public static void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 12

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

Question 13

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition after executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition before executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 14

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is synchronized.

Scanner can be used to read input from the console.

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 15

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

World

HelloWorld

Hello World

Hello

Feedback

The correct answer is: Hello World

Question 16

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Procedural, Secure

Platform-dependent, Procedural, Insecure

Platform-independent, Object-oriented, Secure

Platform-dependent, Object-oriented, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 17

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be compared

To allow an object to be deserialized

To allow an object to be serialized

To allow an object to be cloned

Feedback

The correct answer is: To allow an object to be serialized

Question 18

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the subclass

To refer to a static method

To refer to the current object instance

To refer to a local variable

To refer to the superclass

Feedback

The correct answer is: To refer to the current object instance

Question 19

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

3

1

4

2

Feedback

The correct answer is: 3

Question 20

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

for

switch

if

while

Feedback

The correct answers are: if, switch

===

NA

Question 1

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

25

15

30

20

Feedback

The correct answer is: 25

Question 2

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

1 2 3 4 5

5 4 3 2 1

5 4 3 2

2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 3

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = Car.new();

Car myCar = Car();

Car myCar = create Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 4

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main(String[] args)

public void main()

public static void main()

public void main(String[] args)

Feedback

The correct answer is: public static void main(String[] args)

Question 5

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition before executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 6

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

World

HelloWorld

Hello World

Hello

Feedback

The correct answer is: Hello World

Question 7

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

11

16

21

10

Feedback

The correct answer is: 11

Question 8

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

To terminate a thread

To create a new thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 9

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Scanner is synchronized.

Scanner can be used to read input from the console.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 10

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

1

2

3

4

Feedback

The correct answer is: 3

Question 11

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To skip the current iteration of a loop

To terminate the program

To pause the execution of a program

To exit from a loop or switch statement

Feedback

The correct answer is: To exit from a loop or switch statement

Question 12

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Compiler

Java Development Kit (JDK)

Java Virtual Machine (JVM)

Java Runtime Environment (JRE)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 13

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Object-oriented, Secure

Platform-independent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Platform-independent, Procedural, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 14

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be deserialized

To allow an object to be cloned

To allow an object to be serialized

To allow an object to be compared

Feedback

The correct answer is: To allow an object to be serialized

Question 15

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if (x > 10) // code to execute

if x > 10 { // code to execute }

```
if (x > 10) { // code to execute }
```

```
if x > 10 // code to execute
```

Feedback

The correct answer is: `if (x > 10) { // code to execute }`

Question 16

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

-2.5

4

2.5

2

Feedback

The correct answer is: 2

Question 17

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To execute code regardless of whether an exception is thrown

To catch exceptions

To terminate the program

To throw exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 18

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

private

internal

protected

public

default

Feedback

The correct answers are: public, private, protected, default

Question 19

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the current object instance

To refer to a static method

To refer to the subclass

To refer to a local variable

To refer to the superclass

Feedback

The correct answer is: To refer to the current object instance

Question 20

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

for

while

switch

if

Feedback

The correct answers are: if, switch

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to a local variable

To refer to the current object instance

To refer to the superclass

To refer to a static method

To refer to the subclass

Feedback

The correct answer is: To refer to the current object instance

Question 2

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Runtime Environment (JRE)

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Java Compiler

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 3

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be deserialized

To allow an object to be compared

To allow an object to be cloned

To allow an object to be serialized

Feedback

The correct answer is: To allow an object to be serialized

Question 4

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

30

15

25

Feedback

The correct answer is: 25

Question 5

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To throw exceptions

To execute code regardless of whether an exception is thrown

To terminate the program

To catch exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 6

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

21

10

16

11

Feedback

The correct answer is: 11

Question 7

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Platform-independent, Object-oriented, Secure

Platform-independent, Procedural, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 8

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

private

internal

protected

public

default

Feedback

The correct answers are: public, private, protected, default

Question 9

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

1

4

2

3

Feedback

The correct answer is: 3

Question 10

0.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

-2.5

2

4

2.5

Feedback

The correct answer is: 2

Question 11

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if x > 10 // code to execute

if (x > 10) // code to execute

if x > 10 { // code to execute }

if (x > 10) { // code to execute }

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 12

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = create Car();

Car myCar = new Car();

Car myCar = Car();

Car myCar = Car.new();

Feedback

The correct answer is: Car myCar = new Car();

Question 13

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public void main(String[] args)

public static void main()

public static void main(String[] args)

public void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 14

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 15

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To pause the execution of a program

To skip the current iteration of a loop

To exit from a loop or switch statement

To terminate the program

Feedback

The correct answer is: To exit from a loop or switch statement

Question 16

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

Hello World

World

Hello

HelloWorld

Feedback

The correct answer is: Hello World

Question 17

0.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

while

for

switch

if

Feedback

The correct answers are: if, switch

Question 18

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

To create a new thread

To terminate a thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 19

0.67/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner can be used to read input from a file.

Scanner is part of the java.util package.

Scanner is synchronized.

Scanner can be used to read input from the console.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 20

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

2 3 4 5

5 4 3 2

5 4 3 2 1

1 2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

16

11

10

21

Feedback

The correct answer is: 11

Question 2

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

25

30

15

Feedback

The correct answer is: 25

Question 3

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To skip the current iteration of a loop

To terminate the program

To pause the execution of a program

To exit from a loop or switch statement

Feedback

The correct answer is: To exit from a loop or switch statement

Question 4

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = Car.new();

Car myCar = create Car();

Car myCar = new Car();

Car myCar = Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 5

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To terminate a thread

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

To create a new thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 6

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be cloned

To allow an object to be serialized

To allow an object to be compared

To allow an object to be deserialized

Feedback

The correct answer is: To allow an object to be serialized

Question 7

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Object-oriented, Secure

Platform-independent, Procedural, Secure

Platform-independent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 8

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

3

1

4

2

Feedback

The correct answer is: 3

Question 9

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner can be used to read input from the console.

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Scanner is synchronized.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 10

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

protected

private

default

internal

public

Feedback

The correct answers are: public, private, protected, default

Question 11

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

if

while

for

switch

Feedback

The correct answers are: if, switch

Question 12

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

2 3 4 5

5 4 3 2 1

5 4 3 2

1 2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 13

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the subclass

To refer to a static method

To refer to the superclass

To refer to a local variable

To refer to the current object instance

Feedback

The correct answer is: To refer to the current object instance

Question 14

0.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;  
int y = 20;  
int z = x > y ? x : y;  
System.out.println(z);
```

30

0

10

20

Feedback

The correct answer is: 20

Question 15

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Java Compiler

Java Runtime Environment (JRE)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 16

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main()

public static void main(String[] args)

public void main()

public void main(String[] args)

Feedback

The correct answer is: public static void main(String[] args)

Question 17

0.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

Hello World

World

Hello

HelloWorld

Feedback

The correct answer is: Hello World

Question 18

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To terminate the program

To catch exceptions

To execute code regardless of whether an exception is thrown

To throw exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 19

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition after executing the loop body.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 20

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

2

2.5

4

-2.5

Feedback

The correct answer is: 2

===

NA

Question 1

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

15

25

30

20

Feedback

The correct answer is: 25

Question 2

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To exit from a loop or switch statement

To terminate the program

To pause the execution of a program

To skip the current iteration of a loop

Feedback

The correct answer is: To exit from a loop or switch statement

Question 3

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Procedural, Secure

Platform-dependent, Object-oriented, Secure

Platform-independent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 4

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

11

16

21

10

Feedback

The correct answer is: 11

Question 5

0.67/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner is synchronized.

Scanner can be used to read input from the console.

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 6

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

3

1

2

4

Feedback

The correct answer is: 3

Question 7

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To create a new thread

To prevent multiple threads from accessing a resource simultaneously

To terminate a thread

To allow multiple threads to access a resource simultaneously

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 8

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

Hello

HelloWorld

Hello World

World

Feedback

The correct answer is: Hello World

Question 9

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

-2.5

2.5

4

Feedback

The correct answer is: 2

Question 10

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Development Kit (JDK)

Java Virtual Machine (JVM)

Java Compiler

Java Runtime Environment (JRE)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 11

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 12

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if (x > 10) { // code to execute }

if (x > 10) // code to execute

if x > 10 // code to execute

if x > 10 { // code to execute }

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 13

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To throw exceptions

To catch exceptions

To terminate the program

To execute code regardless of whether an exception is thrown

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 14

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

public

internal

private

default

protected

Feedback

The correct answers are: public, private, protected, default

Question 15

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main()

public static void main(String[] args)

public void main()

public void main(String[] args)

Feedback

The correct answer is: public static void main(String[] args)

Question 16

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

switch

for

if

while

Feedback

The correct answers are: if, switch

Question 17

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be serialized

To allow an object to be deserialized

To allow an object to be cloned

To allow an object to be compared

Feedback

The correct answer is: To allow an object to be serialized

Question 18

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

5 4 3 2 1

1 2 3 4 5

5 4 3 2

2 3 4 5

Feedback

The correct answer is: 1 2 3 4 5

Question 19

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the subclass

To refer to the superclass

To refer to the current object instance

To refer to a local variable

To refer to a static method

Feedback

The correct answer is: To refer to the current object instance

Question 20

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = Car();

Car myCar = Car.new();

Car myCar = create Car();

Feedback

The correct answer is: `Car myCar = new Car();`

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

2 3 4 5

1 2 3 4 5

5 4 3 2

5 4 3 2 1

Feedback

The correct answer is: 1 2 3 4 5

Question 2

1.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To allow multiple threads to access a resource simultaneously

To prevent multiple threads from accessing a resource simultaneously

To create a new thread

To terminate a thread

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 3

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Java Compiler

Java Runtime Environment (JRE)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 4

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

1

3

4

2

Feedback

The correct answer is: 3

Question 5

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner can be used to read input from a file.

Scanner is part of the java.util package.

Scanner can be used to read input from the console.

Scanner is synchronized.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 6

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Procedural, Secure

Platform-dependent, Procedural, Insecure

Platform-dependent, Object-oriented, Secure

Platform-independent, Object-oriented, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 7

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

private

protected

internal

default

public

Feedback

The correct answers are: public, private, protected, default

Question 8

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

20

30

25

15

Feedback

The correct answer is: 25

Question 9

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to the subclass

To refer to the superclass

To refer to the current object instance

To refer to a static method

To refer to a local variable

Feedback

The correct answer is: To refer to the current object instance

Question 10

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To execute code regardless of whether an exception is thrown

To catch exceptions

To throw exceptions

To terminate the program

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 11

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = create Car();

Car myCar = Car();

Car myCar = Car.new();

Feedback

The correct answer is: `Car myCar = new Car();`

Question 12

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int x = 10;  
int y = 20;  
int z = x > y ? x : y;  
System.out.println(z);
```

20

10

30

0

Feedback

The correct answer is: 20

Question 13

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

switch

for

if

while

Feedback

The correct answers are: if, switch

Question 14

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be deserialized

To allow an object to be compared

To allow an object to be cloned

To allow an object to be serialized

Feedback

The correct answer is: To allow an object to be serialized

Question 15

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition before executing the loop body.

Both while and do-while loops check the condition after executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 16

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To skip the current iteration of a loop

To pause the execution of a program

To terminate the program

To exit from a loop or switch statement

Feedback

The correct answer is: To exit from a loop or switch statement

Question 17

0.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

-2.5

2.5

4

2

Feedback

The correct answer is: 2

Question 18

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

21

16

11

10

Feedback

The correct answer is: 11

Question 19

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

`public static void main(String[] args)`

`public static void main()`

`public void main(String[] args)`

`public void main()`

Feedback

The correct answer is: `public static void main(String[] args)`

Question 20

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

Hello World

HelloWorld

Hello

World

Feedback

The correct answer is: Hello World

===

NA

Question 1

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

switch

while

if

for

Feedback

The correct answers are: if, switch

Question 2

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To exit from a loop or switch statement

To terminate the program

To pause the execution of a program

To skip the current iteration of a loop

Feedback

The correct answer is: To exit from a loop or switch statement

Question 3

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner can be used to read input from the console.

Scanner is synchronized.

Scanner can be used to read input from a file.

Scanner is part of the java.util package.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 4

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

21

10

11

16

Feedback

The correct answer is: 11

Question 5

0.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To prevent multiple threads from accessing a resource simultaneously

To terminate a thread

To create a new thread

To allow multiple threads to access a resource simultaneously

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 6

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if x > 10 // code to execute

if (x > 10) // code to execute

if (x > 10) { // code to execute }

if x > 10 { // code to execute }

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 7

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Procedural, Insecure

Platform-dependent, Object-oriented, Secure

Platform-independent, Procedural, Secure

Platform-independent, Object-oriented, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 8

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

Hello

World

Hello World

HelloWorld

Feedback

The correct answer is: Hello World

Question 9

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

25

30

20

15

Feedback

The correct answer is: 25

Question 10

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

1

4

3

2

Feedback

The correct answer is: 3

Question 11

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Runtime Environment (JRE)

Java Virtual Machine (JVM)

Java Compiler

Java Development Kit (JDK)

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 12

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

1 2 3 4 5

5 4 3 2 1

2 3 4 5

5 4 3 2

Feedback

The correct answer is: 1 2 3 4 5

Question 13

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To catch exceptions

To execute code regardless of whether an exception is thrown

To terminate the program

To throw exceptions

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 14

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main()

public static void main(String[] args)

public void main(String[] args)

public void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 15

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = Car();

Car myCar = create Car();

Car myCar = new Car();

Car myCar = Car.new();

Feedback

The correct answer is: Car myCar = new Car();

Question 16

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

default

internal

public

private

protected

Feedback

The correct answers are: public, private, protected, default

Question 17

0.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to a static method

To refer to the subclass

To refer to a local variable

To refer to the current object instance

To refer to the superclass

Feedback

The correct answer is: To refer to the current object instance

Question 18

0.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;  
int b = 2;  
double result = a / b;  
System.out.println(result);
```

2.5

-2.5

The correct answer is: 2

Question 19

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

Both while and do-while loops check the condition before executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Both while and do-while loops check the condition after executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 20

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be deserialized

To allow an object to be compared

To allow an object to be cloned

To allow an object to be serialized

Feedback

The correct answer is: To allow an object to be serialized

===

NA

Question 1

1.00/1.00

Flag question

Question text

What is the purpose of the this keyword in Java?

To refer to a static method

To refer to a local variable

To refer to the current object instance

To refer to the superclass

To refer to the subclass

Feedback

The correct answer is: To refer to the current object instance

Question 2

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int a = 5;
```

```
int b = 2;
```

```
double result = a / b;  
System.out.println(result);
```

5 4 3 2

1 2 3 4 5

5 4 3 2 1

Feedback

The correct answer is: 1 2 3 4 5

Question 4

1.00/1.00

Flag question

Question text

List three features of Java

Platform-dependent, Procedural, Insecure

Platform-dependent, Object-oriented, Secure

Platform-independent, Object-oriented, Secure

Platform-independent, Procedural, Secure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 5

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public void main(String[] args)

public static void main(String[] args)

public static void main()

public void main()

Feedback

The correct answer is: public static void main(String[] args)

Question 6

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = Car.new();

Car myCar = create Car();

Car myCar = new Car();

Car myCar = Car();

Feedback

The correct answer is: Car myCar = new Car();

Question 7

1.00/1.00

Flag question

Question text

Which component of Java is responsible for converting bytecode into machine code?

Java Runtime Environment (JRE)

Java Virtual Machine (JVM)

Java Development Kit (JDK)

Java Compiler

Feedback

The correct answer is: Java Virtual Machine (JVM)

Question 8

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To catch exceptions

To terminate the program

To throw exceptions

To execute code regardless of whether an exception is thrown

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 9

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

protected

private

default

internal

public

Feedback

The correct answers are: public, private, protected, default

Question 10

1.00/1.00

Flag question

Question text

What will be the output of the following code?

```
int a = 5;  
int b = 10;  
System.out.println(a + b * 2);
```

15

30

20

25

Feedback

The correct answer is: 25

Question 11

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

1

3

2

4

Feedback

The correct answer is: 3

Question 12

1.00/1.00

Flag question

Question text

Which of the following are valid selection statements in Java? (Select all that apply)

while

for

switch

if

Feedback

The correct answers are: if, switch

Question 13

1.00/1.00

Flag question

Question text

Explain the difference between while and do-while loops.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Both while and do-while loops check the condition before executing the loop body.

Both while and do-while loops check the condition after executing the loop body.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 14

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if x > 10 { // code to execute }

if (x > 10) { // code to execute }

if (x > 10) // code to execute

if x > 10 // code to execute

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 15

1.00/1.00

Flag question

Question text

Which of the following are true about the Scanner class in Java? (Select all that apply)

Scanner can be used to read input from the console.

Scanner is synchronized.

Scanner is part of the java.util package.

Scanner can be used to read input from a file.

Feedback

The correct answers are: Scanner is part of the java.util package., Scanner can be used to read input from the console., Scanner can be used to read input from a file.

Question 16

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
StringBuilder sb = new StringBuilder("Hello");  
sb.append(" World");  
System.out.println(sb.toString());
```

HelloWorld

Hello

World

Hello World

Feedback

The correct answer is: Hello World

Question 17

1.00/1.00

Flag question

Question text

What is the purpose of the break statement in Java?

To exit from a loop or switch statement

To skip the current iteration of a loop

To pause the execution of a program

To terminate the program

Feedback

The correct answer is: To exit from a loop or switch statement

Question 18

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be compared

To allow an object to be cloned

To allow an object to be serialized

To allow an object to be deserialized

Feedback

The correct answer is: To allow an object to be serialized

Question 19

0.00/1.00

Flag question

Question text

What is the purpose of the synchronized keyword in Java?

To terminate a thread

To allow multiple threads to access a resource simultaneously

To create a new thread

To prevent multiple threads from accessing a resource simultaneously

Feedback

The correct answer is: To prevent multiple threads from accessing a resource simultaneously

Question 20

1.00/1.00

Flag question

Question text

What is the result of the expression $5 + 2 * 3$ in Java?

16

21

11

10

Feedback

The correct answer is: 11

===

NA

Question 1

1.00/1.00

Flag question

Question text

List three features of Java

Platform-independent, Procedural, Secure

Platform-independent, Object-oriented, Secure

Platform-dependent, Object-oriented, Secure

Platform-dependent, Procedural, Insecure

Feedback

The correct answer is: Platform-independent, Object-oriented, Secure

Question 2

1.00/1.00

Flag question

Question text

How do you create an object of a class named Car?

Car myCar = new Car();

Car myCar = Car();

Car myCar = create Car();

Car myCar = Car.new();

Feedback

The correct answer is: `Car myCar = new Car();`

Question 3

1.00/1.00

Flag question

Question text

What is the purpose of the `this` keyword in Java?

To refer to the current object instance

To refer to a static method

To refer to a local variable

To refer to the superclass

To refer to the subclass

Feedback

The correct answer is: To refer to the current object instance

Question 4

1.00/1.00

Flag question

Question text

Explain the difference between `while` and `do-while` loops.

Both `while` and `do-while` loops check the condition before executing the loop body.

Both `while` and `do-while` loops check the condition after executing the loop body.

while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

while loop checks the condition after executing the loop body, whereas do-while loop checks the condition before executing the loop body at least once.

Feedback

The correct answer is: while loop checks the condition before executing the loop body, whereas do-while loop checks the condition after executing the loop body at least once.

Question 5

1.00/1.00

Flag question

Question text

What is the purpose of the finally block in Java exception handling?

To catch exceptions

To terminate the program

To throw exceptions

To execute code regardless of whether an exception is thrown

Feedback

The correct answer is: To execute code regardless of whether an exception is thrown

Question 6

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
for (int i : arr) {  
    System.out.print(i + " ");  
}
```

5 4 3 2 1

1 2 3 4 5

2 3 4 5

5 4 3 2

Feedback

The correct answer is: 1 2 3 4 5

Question 7

1.00/1.00

Flag question

Question text

Write a simple if statement that checks if a variable x is greater than 10.

if (x > 10) // code to execute

if x > 10 { // code to execute }

if x > 10 // code to execute

if (x > 10) { // code to execute }

Feedback

The correct answer is: if (x > 10) { // code to execute }

Question 8

1.00/1.00

Flag question

Question text

Which of the following are valid access modifiers in Java? (Select all that apply)

protected

internal

private

public

default

Feedback

The correct answers are: public, private, protected, default

Question 9

1.00/1.00

Flag question

Question text

What is the output of the following code?

```
int[] arr = {1, 2, 3, 4, 5};  
System.out.println(arr[2]);
```

4

3

1

2

Feedback

The correct answer is: 3

Question 10

1.00/1.00

Flag question

Question text

What is the purpose of the Serializable interface in Java?

To allow an object to be compared

To allow an object to be deserialized

To allow an object to be cloned

To allow an object to be serialized

Feedback

The correct answer is: To allow an object to be serialized

Question 11

1.00/1.00

Flag question

Question text

What is the main method signature in Java?

public static void main()

public void main(String[] args)

public void main()

public static void main(String[] args)

Feedback

The correct answer is: `public static void main(String[] args)`

Question 12
