

## Employee Details Form with Id and Name

We have to develop an employee details form to display and edit the employee information. We will build this web page gradually by including the form fields one by one.

Develop an employee details form with following prepopulated fields.

- Employee Id.
- Employee Name.

The screenshot shows a web browser window with the address bar displaying `http://localhost:8080/employeeDetails`. The page content is titled "Employee Details" and contains two fields: "Id : 969143" and "Name : John". The "Name" field is a text input box with the value "John" entered.

- Create a bean class Employee with appropriate getter setters to populate the employee Id and name.
- Create an EmployeeDetailsServlet and populate the employee object with values for attributes id and name.
- Set the Employee instance created in the previous step to request.
- Use RequestDispatcher forward method to display employee details form to edit-employee.jsp, which contains the employee details form.
- Use JSTL tags to populate the form fields.

**NOTE:** Code submission not required. To be implemented using eclipse IDE and manually verified by the SME.

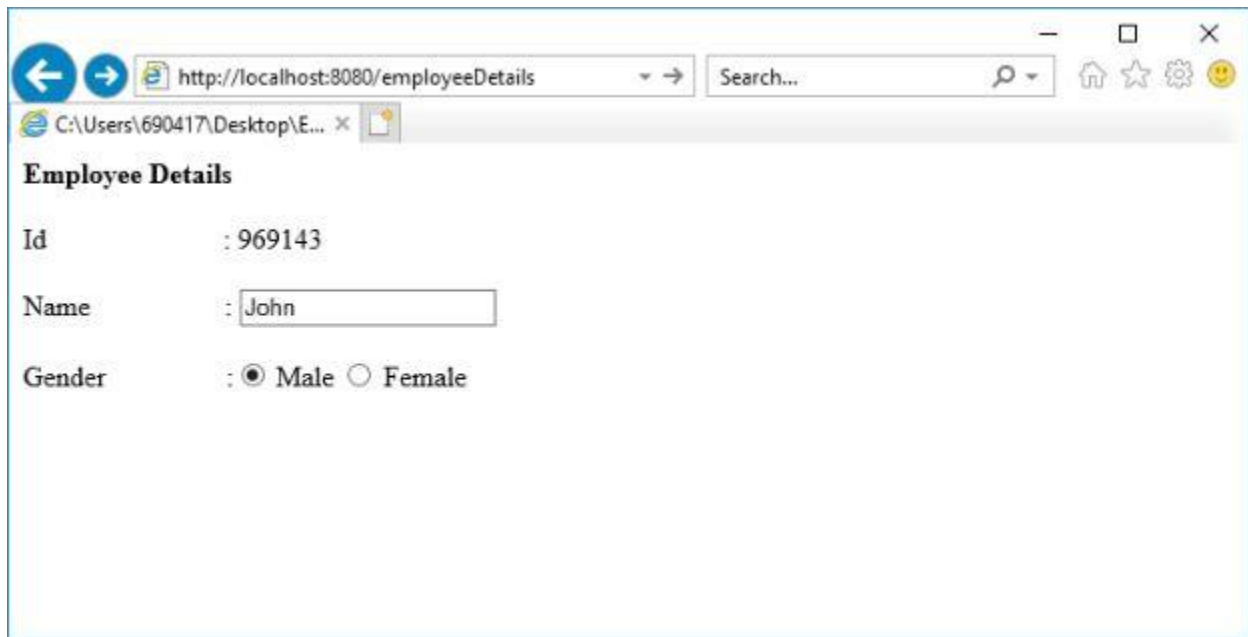

## Hands on 2

### Employee Details Form with Gender

Include Gender field in the Employee Details Form created earlier.

Modify employee details form with following prepopulated fields.

- Gender

The screenshot shows a web browser window with the address bar displaying `http://localhost:8080/employeeDetails`. The page title is "Employee Details". The form contains the following fields:

- Id** : 969143
- Name** :
- Gender** : ☒ Male ☐ Female

Following changes needs to be done:

- Include gender attribute in Employee with appropriate getter/setters.
- Modify EmployeeDetailsServlet to set the value of gender.
- Modify JSP to include gender field and set the gender option value based on the employee object reference. Use JSTL tags to dynamically set the value.

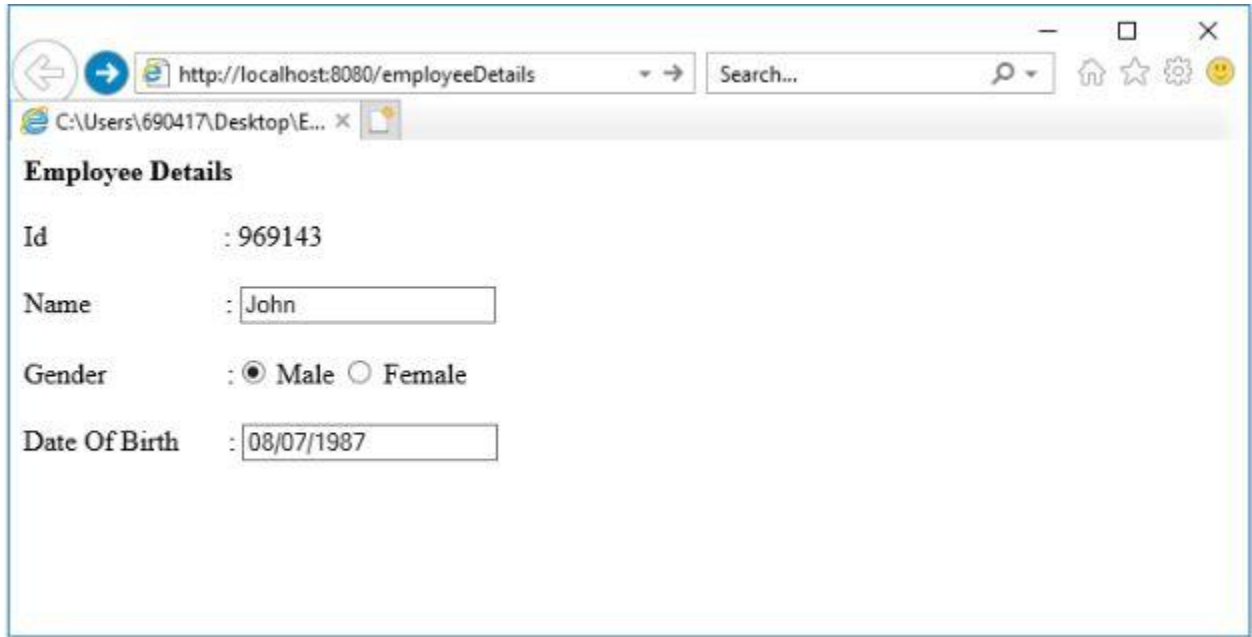

**NOTE:** Code submission not required. To be implemented using eclipse IDE and manually verified by the SME.

## Employee Details Form with Date of birth

Include Date of Birth field in the Employee Details Form created earlier.

Modify employee details form with following prepopulated fields.

- Employee Date Of Birth

The screenshot shows a web browser window with the address bar displaying `http://localhost:8080/employeeDetails`. The page title is "Employee Details". The form contains the following fields:

|               |   |                                                                    |
|---------------|---|--------------------------------------------------------------------|
| Id            | : | 969143                                                             |
| Name          | : | <input type="text" value="John"/>                                  |
| Gender        | : | <input checked="" type="radio"/> Male <input type="radio"/> Female |
| Date Of Birth | : | <input type="text" value="08/07/1987"/>                            |

Following changes needs to be done:

- Include Date of Birth attribute in Employee with appropriate getter/setters.
- Modify EmployeeDetailsServlet to set the value of Date of Birth.
- Modify JSP to include Date of Birth field and set the Date of Birth text box value based on the employee object reference.
- Use JSTL formatDate tag to format the date in format dd/MM/yyyy and display to the user.

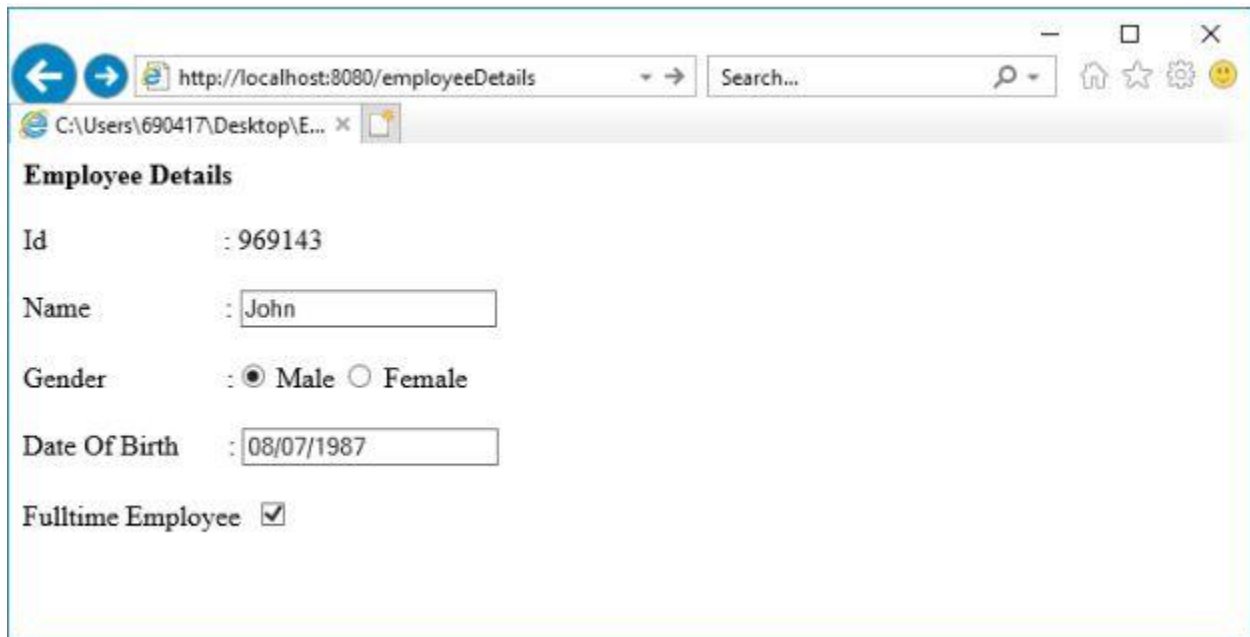

**NOTE:** Code submission not required. To be implemented using eclipse IDE and manually verified by the SME.

## Employee Details Form with employment status

Include employment status field in the Employee Details Form created earlier.

Modify employee details form with following prepopulated fields.

- Fulltime Employee

The screenshot shows a web browser window with the address bar displaying `http://localhost:8080/employeeDetails`. The browser has multiple tabs, with the active one showing the file path `C:\Users\690417\Desktop\E...`. The page content is titled "Employee Details" and contains the following fields:

- Id**: 969143
- Name**: John
- Gender**: ☒ Male ☐ Female
- Date Of Birth**: 08/07/1987
- Fulltime Employee**: ☒

Following changes needs to be done:

- Include fulltime attribute in Employee with appropriate getter/setters.
- Modify EmployeeDetailsServlet to set the value of fulltime.
- Modify JSP to include Fulltime Employee field and set the Fulltime Employee option value based on the employee object reference. Use JSTL tags to dynamically set the value.

**NOTE:** Code submission not required. To be implemented using eclipse IDE and manually verified by the SME.

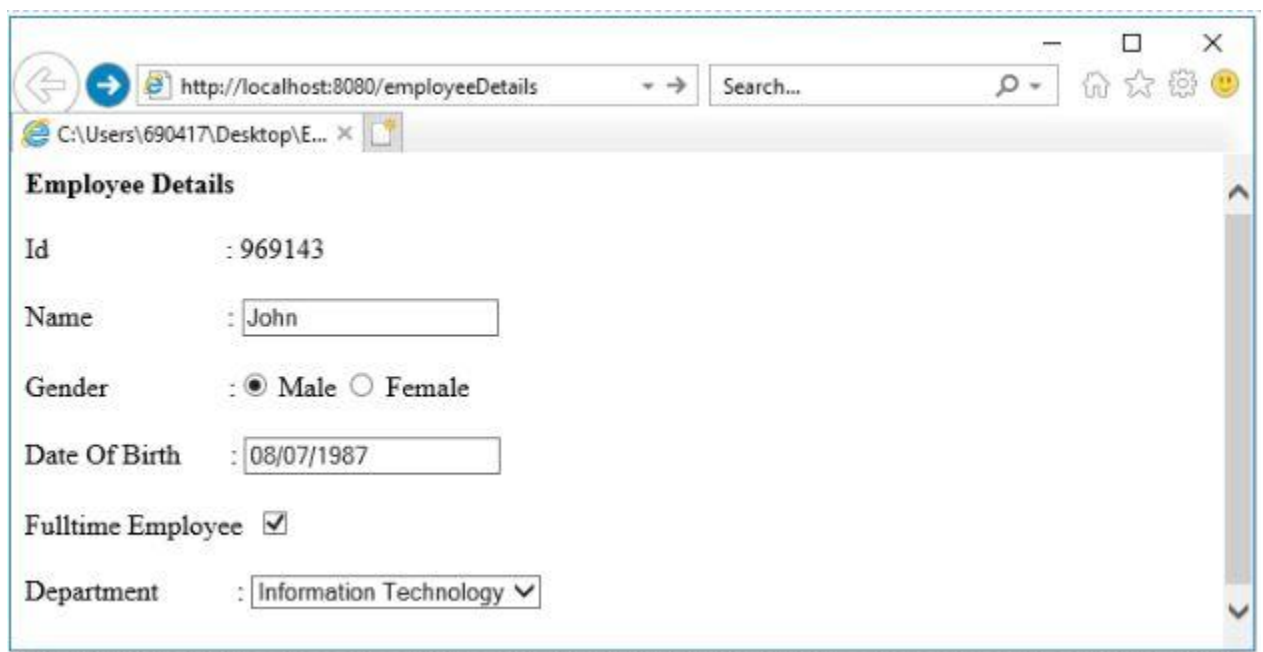

## Employee Details Form with Department

Include Department drop down field in the Employee Details Form created earlier.

Modify employee details form with following prepopulated fields.

- Department

Populate the list of departments in a list box and preselect the department in which the employee currently works.

The screenshot shows a web browser window with the address bar displaying `http://localhost:8080/employeeDetails`. The page title is "Employee Details". The form contains the following fields:

- Id**: 969143
- Name**: John
- Gender**: ☒ Male ☐ Female
- Date Of Birth**: 08/07/1987
- Fulltime Employee**: ☒
- Department**: Information Technology (selected from a dropdown menu)

### Note:

- Include department attribute in Employee with appropriate getter/setters.
- Modify EmployeeDetailsServlet to populate the list of departments in String array and set the department list array in the request.
- Modify EmployeeDetailsServlet to set the employee's current department.
- Use JSTL tags to construct the form fields.
- Use `<c:forEach>` tag to populate the department list in the select box.
- Use `<c:if>` tag to preselect the department in the select box.

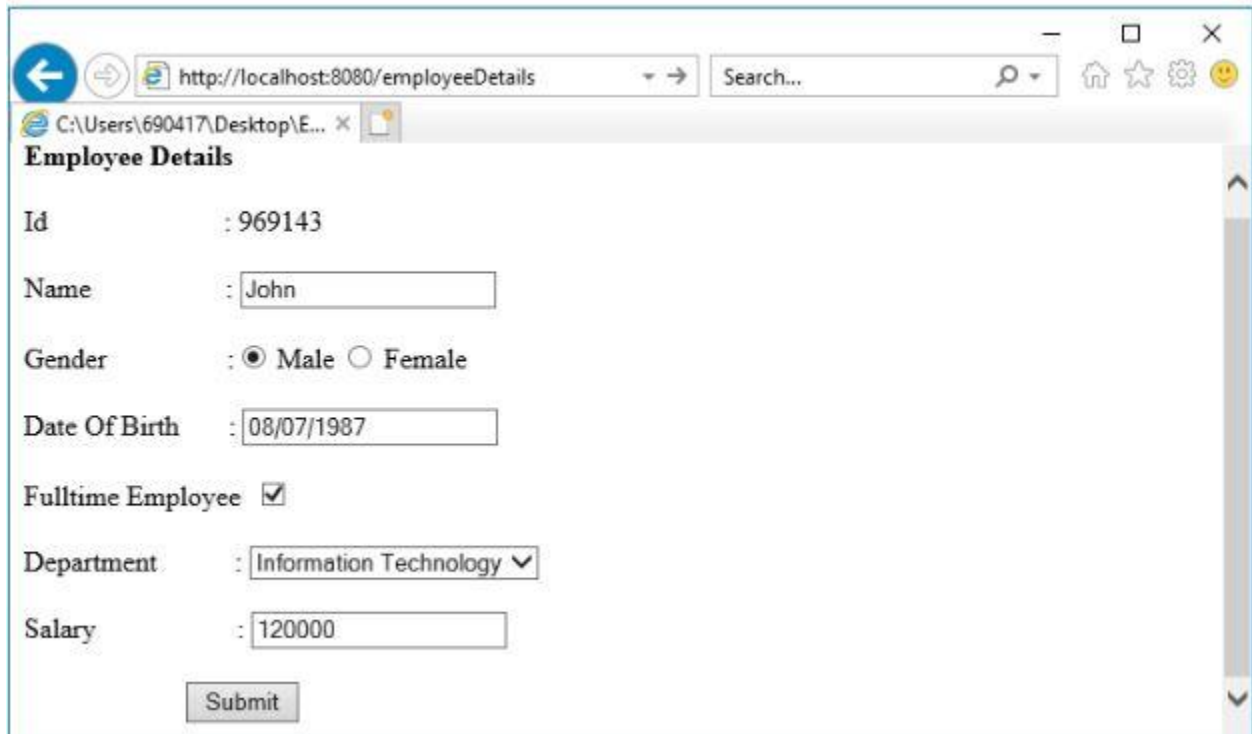

**NOTE:** Code submission not required. To be implemented using eclipse IDE and manually verified by the SME.

## Employee Details Form with Salary

Include salary field in the Employee Details Form created earlier.

Modify employee details form with following prepopulated fields.

- Salary

The screenshot shows a web browser window with the URL `http://localhost:8080/employeeDetails`. The page title is "Employee Details". The form contains the following fields:

- Id**: 969143
- Name**: John
- Gender**: ☒ Male ☐ Female
- Date Of Birth**: 08/07/1987
- Fulltime Employee**: ☒
- Department**: Information Technology (dropdown menu)
- Salary**: 120000

A "Submit" button is located at the bottom of the form.

Following changes needs to be done:

- Include salary attribute in Employee with appropriate getter/setters.
- Modify EmployeeDetailsServlet to set the value of salary.
- Modify JSP to include salary field and set the salary option value based on the employee object reference. Use JSTL tags to dynamically set the value.
- Include submit button in the JSP.

**NOTE:** Code submission not required. To be implemented using eclipse IDE and manually verified by the SME.
